CYBER GRC · AUTHORISED RESELLER IN TÜRKIYE

SC SecureChapter eCISO

The platform that unites governance, risk and compliance (GRC) with cyber operations in a single command layer. It tracks regulatory change, keeps your risk picture current, collects evidence as the work happens and walks you into every audit prepared.

Never sleeps · Never forgets · Never resigns

THE PROBLEM WE SOLVE

Scarce

Most growing organisations can't justify a full-time CISO, so governance lands on whoever has the least crowded calendar.

Fragile

Where a CISO exists, the office lives in their head and their spreadsheets. When the CISO changes, the institutional memory leaves too.

Drowning

Those who stay spend their best hours chasing evidence and formatting board slides.

WHAT DOES YOUR ECISO DO EVERY DAY?

Watches the horizon

Regulations can change overnight: new deadlines, amendments, expectations. Your eCISO tracks what changed and what it means for you before it becomes an audit finding.

Keeps the risk picture current

Risks, vendors, assets, identities and exceptions in one living picture: where you stand today, not a spreadsheet that was true last quarter.

Collects the proof as you go

Evidence is gathered while the work happens, not dug up the weekend before an audit. Always current, always findable, always attributable.

Briefs the board

When leadership asks “Are we OK?”, your eCISO answers with posture, trends and the evidence behind them, in board language rather than engineer language.

PLATFORM MODULES

Module	What it gives you
Third-Party Risk Management (TPRM)	Govern vendor risk across the full lifecycle, with a living risk profile for every vendor.
Cyber Incident Management	Run security incidents end to end, confidential by design.
Application Security	Keep application risks and exceptions under oversight.
Identity Governance & Administration (IGA)	Govern human and machine identities: review and certify access, and surface conflicts.
Business Continuity Management (BCM)	Plan, test and prove continuity.
AI Governance	Govern your use of AI before the regulators ask.
GRC: Risk & Control	The control core of the platform: risk register, controls and framework mapping.
Privacy & Data Protection	Turn your privacy obligations into day-to-day operations.
OT / ICS Security	Govern operational technology risk alongside IT.

FRAMEWORK COVERAGE

ISO 27001 · SOC 2 · PCI DSS · NIST CSF · DORA · NIS2 · ISO 42001 · IEC 62443 · GDPR

Control mapping for KVKK (Turkish data protection law) and sector regulations (BDDK, SPK, SEDDK, etc.) is assessed together during the POC.

WHO IS IT FOR?

Growing companies

No CISO yet? CISO-grade structure from day one, ready for your first framework, your first audit and your biggest customer's security questionnaire.

Enterprises and their CISOs

You don't lack leadership, you lack leverage. One command layer over the tools you already run, and one evidence base for ISO 27001, SOC 2, NIS2 and DORA.

Holding groups and multi-entity organisations

Every subsidiary gets its own isolated eCISO at its own maturity; the group gets one consolidated posture. Acquisitions come under governance from the first week.

vCISOs, consulting and audit firms

Give every client an eCISO: portfolio view, strict client isolation, white-label reporting under your brand and one methodology.

COMMAND CENTRE, INTEGRATIONS AND SECURITY

Executive & CISO Command Centre

- CISO dashboard with KRI tracking
- Board-ready report generation
- Regulatory attestation and evidence pack export
- Audit readiness score
- Role-based access with all standard roles predefined

Integrations

- SIEM / EDR connectors
- Cloud provider integrations
- CI/CD security pipeline hooks
- SSO / identity providers
- Evidence automation connectors

Secure by Design

- Post-quantum-ready, file-level encryption
- Defence in depth with extra hardening at the database layer
- Continuous penetration testing
- Multi-tenant architecture with strict tenant isolation
- Use as an internal tool or as white-labelled SaaS under your brand

HIRE A CISO, RENT A VCISO OR GAIN AN ECISO.

Path	What it gives you	What to keep in mind
Hiring a CISO	The gold standard: dedicated, full-time leadership.	Hard to find, afford and keep; with short tenures, the search starts again.
Renting a vCISO	Senior expertise on tap.	Hours are finite, and knowledge often leaves with the engagement.
Gaining an eCISO	The standing layer underneath both: it works from day one, makes a CISO more effective and a vCISO more scalable.	It works best with a human at the helm: yours, or one you trust.

TWO WAYS: TRY IT FIRST, OR BUY DIRECTLY.

Proof of Concept (POC)

Start with a 30-minute live walkthrough and bring your hardest governance question. Then try the platform on your own scenarios with the frameworks and modules you choose. Scope, duration and success criteria are agreed in writing at the outset.

Direct Purchase

If your needs are clear, request a quote directly. Quote, contract and invoicing go through TurnCloudON; deployment, framework mapping and user support are provided by TurnCloudON experts.

Request a POC

In Türkiye you obtain SecureChapter through TurnCloudON: walkthrough, POC, quote and deployment with a single point of contact.
